## Project: Alpha - Selected Bug Description

**XSS: Anti cross-site scripting filter (XSS\_CONFIG)**

You should configure it as the first filter in your chain (web.xml) and it's generally a good idea to let it catch every request made to your site. The actual implementation should consist of two classes, the actual filter is quite simple, it wraps the HTTP request object in a specialized `HttpServletRequestWrapper` that will perform the filtering.

he wrapper overrides the `getParameterValues()`, `getParameter()` and `getHeader()` methods to execute the filtering before returning the desired field to the caller. The actual XSS checking and stripping is performed in the `stripXSS()` private method.
