The screenshot shows the MSAT Interface. At the top, there's a title bar with a gear icon and the text 'MSAT Interface'. Below the title bar, the main content area is divided into two sections. The top section is labeled 'Project: Alpha' and contains a large, empty rectangular area. The bottom section is labeled 'Bug Description' and contains a large, empty rectangular area. On the right side of the interface, there is a 'Filters' sidebar. This sidebar has a tab labeled 'Filters' and contains a list of tools (tool1 to tool10) with checkboxes next to them. The 'Select All' checkbox is checked, and the 'Deselect All' checkbox is unchecked. Below the tools list, there are sections for 'Bugs' and 'Vulnerability Type'. The 'Bugs' section has checkboxes for 'My Bugs' and 'All Bugs', with 'All Bugs' checked. The 'Vulnerability Type' section has checkboxes for 'SQL Injection' and 'XSS', with 'XSS' checked. At the bottom right of the 'Bug Description' section, there are two buttons: 'Fix Now' and 'Know More'.

Project: Alpha - Selected Bug Description

XSS: Anti cross-site scripting filter (XSS_CONFIG)

You should configure it as the first filter in your chain (web.xml) and it's generally a good idea to let it catch every request made to your site. The actual implementation should consist of two classes, the actual filter is quite simple, it wraps the HTTP request object in a specialized HttpServletRequestWrapper that will perform the filtering.

he wrapper overrides the `getParameterValues()`, `getParameter()` and `getHeader()` methods to execute the filtering before returning the desired field to the caller. The actual XSS checking and striping is performed in the `stripXSS()` private method.

Suggested Quick Fixes:

```
1. Add the following filters to the web.xml file:
2. Add the following filters to the web.xml file:
3. Add the following filters to the web.xml file:
4. Add the following filters to the web.xml file:
```
