Bug Description

XSS: Anti cross-site scripting filter (XSS_CONFIG)

Wrap the HTTP request object in a specialized HttpServletRequestWrapper that will perform filtering.

Fix Now

Know More

MSAT Interface

Project: Alpha - Selected Bug Description

XSS: Anti cross-site scripting filter (XSS_CONFIG)

You should configure it as the first filter in your chain (web.xml) and it's generally a good idea to let it catch every request made to your site. The actual implementation should consist of two classes, the actual filter is quite simple, it wraps the HTTP request object in a specialized HttpServletRequestWrapper that will perform the filtering.

he wrapper overrides the `getParameterValues()`, `getParameter()` and `getHeader()` methods to execute the filtering before returning the desired field to the caller. The actual XSS checking and stripping is performed in the `stripXSS()` private method.

Suggested Quick Fixes:

```

<filter>
<filter-name>XSSFilter</filter-name>
<filter-class>com.example.xss.XSSFilter</filter-class>
</filter>
<filter>
<filter-name>XSSFilter</filter-name>
<filter-class>com.example.xss.XSSFilter</filter-class>
</filter>
<filter>
<filter-name>XSSFilter</filter-name>
<filter-class>com.example.xss.XSSFilter</filter-class>
</filter>

```

The respective commit is tagged as best, better, good, bad or worst depending on the parameters tuned.

In present example, best resembles that old bugs fixed by this commit takes 5 hours or more than fixing new bugs introduced.

Similarly, better for 2 to 5 hours, good for 0 - 2, bad when new bugs take time of 0 to 2 and worst for greater than 2 hours.

Suggested Quick Fixes:
