The screenshot displays the MSAT Interface. The main workspace is titled "Project: Alpha" and is currently empty. Below this workspace is a "Bug Description" section containing two buttons: "Fix Now" and "Know More". On the right side, there is a "Filters" sidebar. It includes a "Select All" checkbox (unchecked) and a "Deselect All" checkbox (checked). Below these are ten tool entries, each with a checkbox and an icon: tool1 (list icon), tool2 (refresh icon), tool3 (home icon), tool4 (server icon), tool5 (server with gear icon), tool6 (server icon), tool7 (server icon), tool8 (server with gear icon), tool9 (server with gear icon), and tool10 (server with gear icon). At the bottom of the sidebar, there are "Bugs" filters: "My Bugs" (unchecked) and "All Bugs" (checked), followed by a "Vulnerability Type" section with "SQL Injection" (unchecked) and "XSS" (unchecked).

Project: Alpha - Selected Bug Description

XSS: Anti cross-site scripting filter (XSS\_CONFIG)

You should configure it as the first filter in your chain (web.xml) and it's generally a good idea to let it catch every request made to your site. The actual implementation should consist of two classes, the actual filter is quite simple, it wraps the HTTP request object in a specialized HttpServletRequestWrapper that will perform the filtering.

he wrapper overrides the `getParameterValues()`, `getParameter()` and `getHeader()` methods to execute the filtering before returning the desired field to the caller. The actual XSS checking and striping is performed in the `stripXSS()` private method.

Suggested Quick Fixes:

```
1. Add the following filters to the web.xml file:
2. Add the following filters to the web.xml file:
3. Add the following filters to the web.xml file:
4. Add the following filters to the web.xml file:
```

Apply
